

PRESS RELEASE

Gardanne, France – July 7, 2026

The first FIDO2 devices officially listed by the French Digital Health Agency (ANS) for healthcare professional authentication are NEOWAVE product

NEOWAVE, a French specialist in strong authentication and secure digital transactions, announces that four of its FIDO2 products have been officially listed by the French Digital Health Agency (Agence du Numérique en Santé – ANS) as Electronic Identification Means (EIM) compatible with Pro Santé Connect. They are the first FIDO2 products on the market to be officially listed by the ANS.

A new milestone in strengthening healthcare professional authentication

Operated by the French Digital Health Agency (Agence du Numérique en Santé – ANS), Pro Santé Connect is the national authentication service that enables healthcare professionals to securely access digital health services.

CYBERSECURITY
MADE IN EUROPE

To expand the range of electronic identification means compatible with this service, the ANS has published its first official list of FIDO2 authentication devices. The listed devices are all part of NEOWAVE's FIDO2 product portfolio:

Badgeo NFC FIDO2, Badgeo Dual FIDO2, Winkeo2J-A FIDO2, Winkeo2J-C FIDO2

This initiative aims to provide secure, interoperable authentication solutions tailored to real-world healthcare environments. Authentication using FIDO2 security keys and smart cards is already available in the Pro Santé Connect test environment. Production deployment, scheduled for September 2026, will enable healthcare institutions, software vendors and system integrators to prepare for the first operational rollouts.

This official listing also opens new deployment opportunities within the ANS-led HospiConnect programme, helping to strengthen digital identities and secure access to digital services across healthcare institution.

Certified FIDO2 devices designed and manufactured in France

According to the ANS, 764 cybersecurity incidents were reported across the French healthcare and medico-social sectors in 2025. Credential theft remains one of the most significant threats, with phishing campaigns and credential-stealing malware continuing to be among the most common attack vectors. In this context, strengthening authentication has become a key cybersecurity priority.

Entirely designed, developed and manufactured in France, NEOWAVE's FIDO2 products are FIDO2 Level 2 certified and carry the Cybersecurity Made in Europe label, demonstrating their high level of security and the company's commitment to trusted European cybersecurity.

« We are delighted that our FIDO2 devices are the first FIDO2 products on the market to be officially listed by the French Digital Health Agency for Pro Santé Connect. This recognition confirms our commitment to developing certified strong authentication solutions designed and manufactured in France. ».

Availability:

These FIDO2 devices will be available on the ANS platform from September 2026:

About the French Digital Health Agency (ANS)

The French Digital Health Agency (Agence du Numérique en Santé – ANS) supports the digital transformation of France's healthcare system, helping to accelerate the adoption of secure and innovative digital health services.

The ANS has three core missions. First, it regulates the digital health ecosystem by defining frameworks, standards and best practices, particularly in the areas of cybersecurity and interoperability, to enable the secure and trusted exchange of health data. Second, it leads national digital health projects on behalf of the French public authorities. Finally, the ANS supports the nationwide and regional deployment of digital health tools and services to encourage their adoption and foster innovation across the healthcare sector.
